

Dual Axis Deflection Unit

OVERVIEW

The **sercalo** magnetic deflection units are used for optical beam steering and scanning. The 2-D mirror has a reflective surface up to 3.2 x 4.2 mm.

Using magnetic actuation, the deflection angle is set linearly with the driving current. The mirror is designed for DC operation as well as scanning.

FEATURES

- 2 actuation Axes
- Up to $\pm 5^\circ$
- Linear control

APPLICATIONS

- 2D Static and dynamic Optical Beam Steering
- 2D Optical Scanner Device
