
SCBU NxM FIBER OPTIC SWITCH

non-blocking or tree architecture

OVERVIEW

sercalo's fiber optic SCBU NxM switches are bidirectional opto-mechanical switches based on coaxial design where a matrix of MEMS mirrors redirects light from N inputs to M outputs. The optical networks can be based on a strictly non-blocking matrix (from 4x4 up to 16x16 ports) or on a tree structure (up to 2x540 ports). The underlying MEMS technology results in low insertion loss and low crosstalk between channels while keeping a constant switching performance over life.

The miniature package withstands rugged environments and is well suited for direct mounting on printed circuit boards.

The underlying MEMS technology results in low insertion loss and low crosstalk between channels while keeping a constant switching performance over life. The hermetically sealed MEMS and the laser welded collimators guarantee broad temperature range and superior long term stability. The part is designed to conform to Telcordia 1221 reliability standards. No epoxy is present in the optical path.

FEATURES

- Fast switching time
- Low insertion loss
- Up to 16x16 or 2x540 optical ports
- UART, I²C/SMBus and USB interfaces
- Custom networks available on request
- ROHS compliant

APPLICATIONS

- Optical network reconfiguration
- Optical network protection and restoration
- Instrumentation
- Test and measurement

ORDERING INFORMATION

SCBU	16x16	-	9	N

Switch type:
SCBU = 1250 – 1670 nm

Network:
4x4, 8x8, 16x16 (matrix) or from 1x2 up to 2x540 (tree)

Fiber type:
9 = SMF28
XB = Corning ClearCurve
other fiber types and wavelengths upon request

Fiber sleeve type:
R = 8-fibers or 12-fibers ribbon with 250 µm acrylate coating
N = 900 um sleeve

DESCRIPTION

sercalo's SCBU fiber optic switches are based on a strictly non-blocking bidirectional architecture. An additional status where the channels are disconnected is available. The switch is non latching: at power-off it breaks the optical connection and routing of ports is not defined. The component is bidirectional, i.e. the common port can be used as input or output of the light signal.

[1] Insertion loss is optimized for one band. If the switch is operated over all four bands add 0.5 dB to IL. Band is selectable over software between 1310, 1550 nm and 1625 nm. [2] Values at 1550nm or 1310nm at 25 ˚C, without connectors. [3] It is recommended to turn off the laser during switch transients when switching optical power above 100 mW. [4] For constant temperature and polarization. [5] Through onboard pull-up resistor.
